Monitoring for TIBCO users

RTView Packaged Monitors

TIBCO EMS Monitor

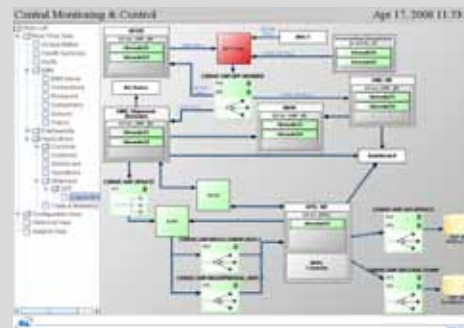

TIBCO BW Monitor

RTView for TIBCO Monitor System

Platform for creation of custom monitoring applications

RTView for TIBCO BW Monitor

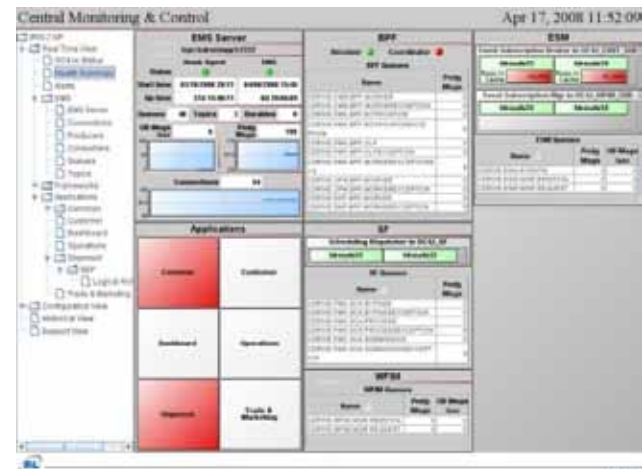

- Provides visibility into BW
 - Servers, Engines, Processes, Activities
- Built using RTView
 - Heatmap, Grid, Table Displays
 - History
 - Alerting (planned)
 - Browser or desktop deployment
- Customized or extended through RTView

Typical TIBCO BW Monitoring Challenges

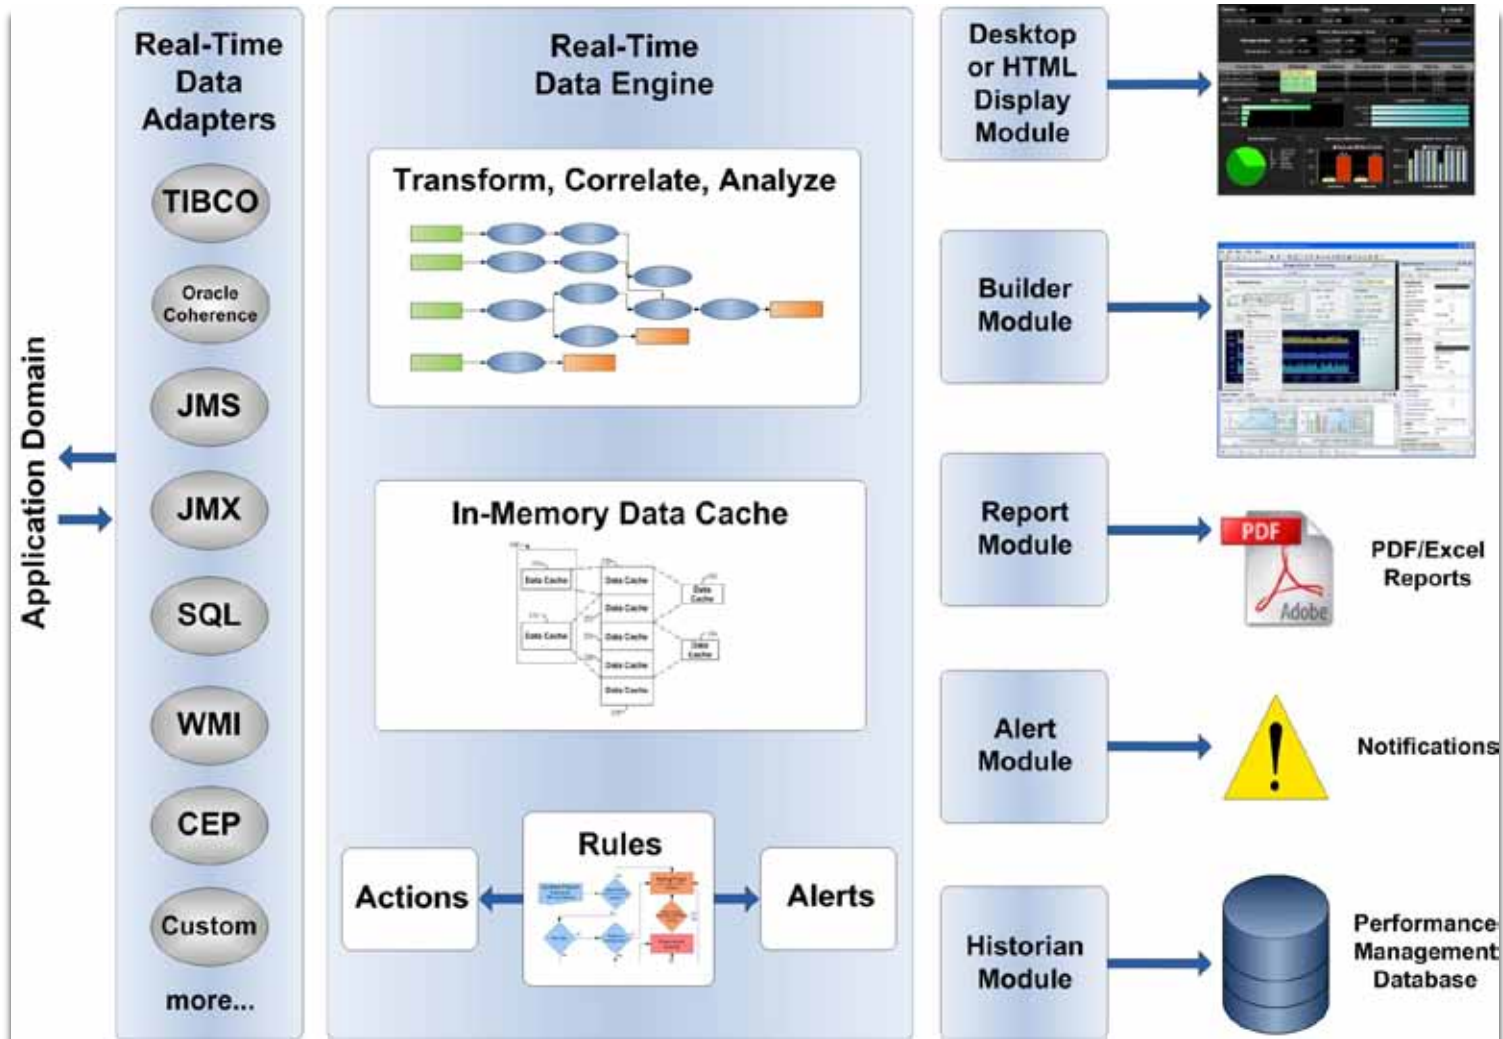

1. “Messages are piling up in a queue consumed by our process at an unusual rate.”
2. “We have regular “spikes” of traffic, so a flat threshold is not what I need. I want to use historical data to set dynamic threshold boundaries based on time of day, day of the week, or holiday season.”
3. “Alert on system resource issues (CPU and memory) when they run hot to add hardware or allocate resources”
4. “See when specific processes in a BW engine are starting to take longer than usual to complete, especially DB queries and JMS publishes. But TIBCO Administrator only lets me determine the average time a publish took since the engine was started. We want to look at what happened between 3 am and 4 am and compare that to the rest of the day“.

SL Corporation and TIBCO Relationship

- SL has been a TIBCO alliance partner since 2002
- TIBCO branded version of RTView introduced in June 2005

RTView - Architecture

RTView Builder

§ Modify existing displays or create new

§ WYSIWYG drag & drop from object palette

§ Specify properties and data sources from Object Property sheet

§ All Properties can be data-driven

RTView for Application Performance Monitoring

Single Pane of Glass

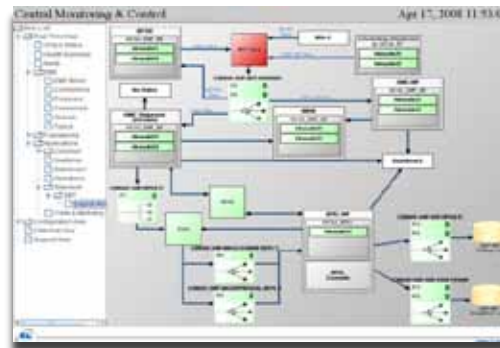

User Experience
